3. Text & Formatting Elements

Basic Text Structure

This is a standard paragraph (`<p>`). We can emphasize words by making them **bold** using the `` tag, or show text in *italics* using the `<i>` tag.

Here is a line break:
The text continues on a new line.

Quotations and Code

The `<blockquote>` tag is perfect for long quotations from another source. It ensures semantic correctness.

To display inline code, use the `<code>` tag.

4. List Examples

3. Text & Formatting Elements

Basic Text Structure

This is a standard paragraph (p). We can emphasize words by making them bold using the tag, or show text in italics using the <i> tag.

Here is a line break:
The text continues on a new line.

Quotations and Code

The "blockquote" tag is perfect for long quotations from another source. It ensures semantic correctness.

To display inline code, use the `<code><code>hello HTML!</code></code> tag.`

| <head> | Metadata | Yes |
| <nav> | Semantic Layout | No |
| <td> | Table Content | Yes (in <tr>) |
| This table demonstrates proper usage of all table tags. | | |

The diagram illustrates the mapping between HTML tags and their visual representation in the '6. Table Example' table. Arrows point from the visual elements to the corresponding HTML tags:

- <h4>** points to the section title '6. Table Example'.
- <thead>** points to the header row of the table.
- <tr></tr>** points to a single row of the table.
- <table>** points to the entire table structure.
- <tbody>** points to the body of the table (rows 2-4).
- <tr>** points to a single row within the body.
- <td>** points to a single table cell.
- <tfoot>** points to the footer row of the table.
